

Zoho SalesIQ - Zobot to assist your visitors

Hi, Zobot here!

A techie journey awaits you.

About the course

The course is exclusively for the developers, which helps to learn to build a bot that can guide, perform actions, and assist the website visitors' queries. The training enables you to create a Zobot according to your business needs and deploy them on your site.

Who can attend the course

Developer/webmaster/Implementer/Administrator can understand programming language and take care of all the implementation on your website. A powerful Zobot that can entirely replace your operator can be built with the help of the SalesIQ scripts platform, which uses Deluge language. To understand deluge easily, we recommend a developer from the Organization to attend the course.

Zobot to assist your visitors
